SPAMZAPPER EMAIL FILTERING NOW WITH THE SECURITY OF INTRUSION PROTECTION PRODUCES INTERNATIONAL RELIABILITY AND PERFORMANCE

Experts agree that more than 84 percent of incoming email is SPAM; SpamZapper by ABS Computer Technology now includes Intrusion Prevention.

February 21, 2006, (PITTSBURGH, PA) – Today, ABS Computer Technology, Inc., announces a new solution to the SPAM problem that makes Inboxes safer than ever. SpamZapper is a multi-layered solution for Internet security that defends users against SPAM, Viruses, Spyware, and Phishing.

SpamZapper now includes Intrusion Prevention (our own *Active Defense*) which has improved the reliability of Internet Servers. SpamZapper servers have been on-line since their last power-up made in July of 2005! When was the last time your mail servers were down?

“Many of our customers have requested the ability to communicate and retrieve e-mail while traveling, and SpamZapper permits them the ability to reliably communicate once again.”, says company President, Albert E. Whale, CHS CISA CISSP.

Whale, who is certified in Homeland Security by the ACFEI (American College of Forensics Examiners International) and has over 12 years of experience in developing ISP and internet security, states that in addition to online security, SpamZapper saves time and improves communications and security. Whale is also the past President of the InfraGard Pittsburgh Members Alliance.

“I just love the speed, it’s even faster than having our own server in-house! I am very happy.”, says Anthony Thiel of Thiel Corporation, N.V., Aruba. “Now we can save money on license fees, man-power, and send and receive E-Mail from any Internet connection, even when we travel!”

SpamZapper permits reliable and efficient communications via Email. SpamZapper is available for both on-site and outsourced configurations for maintenance free operations. SpamZapper’s hosting fees include an all-inclusive approach to secure e-mail delivery, without an additional cost per message.

“Time is money for my customers,” says Whale. “Whether you are an ISP, government, utility or business, SPAM can literally paralyze or destroy operations. SpamZapper now protects your servers as well with built in Intrusion Protection.”

SpamZapper is a server based solution, which means that SPAM never enters an organization’s virtual walls. By stopping SPAM early, SpamZapper reduces the introduction of viruses, Spyware and other online invasions.

“We are taking a front-line defense in our development of SpamZapper and internet security,” says Whale. “This is not just to cut down on ‘unwanted emails,’ this is an all-out effort to eliminate dangerous attacks on my customers’ email and internet servers.” ABS works with Law Enforcement Agencies to go after the Spammers where they generate under the Federal **CAN SPAM Legislation**.
