For Immediate Release

More than 30,000,000 Email Connections filtered by the SpamZapper, in the last two years.

Active Defense is an essential part of the SpamZapper success story claims ABS Computer Technology, Inc.

November 10, 2006, (Pittsburgh, PA) – ABS Computer Technology (ABS), announces a recent milestone in the number of filtered connections for it's Email Security services which it has called SpamZapper. The SpamZapper has recently exceeded more than 30 Million connections, in just the last two years.

SpamZapper is a multi-layered defense strategy originally developed for ISPs, and is now in use by Security Professionals, ISPs, Businesses, and Non-profit organizations on an international basis. Albert Whale, the president of ABS, claims that it success is in the fact that SpamZapper is a Multi-Layered defense strategy, and that ABS listens to it's customers, in providing support, for new ideas, and to improve customer service.

The SpamZapper currently has the ability to update the definitions for Email Filtering for each Server, Domain name, or Email address. Access is available to the configuration settings through ABS's Server Administrator from anywhere on the Internet.

ABS provides the SpamZapper filtering service for it's customers with a System on-site, or as an Out Sourced solution with full maintenance included in the monthly service fee. More information is available about the ABS or the SpamZapper from the Company's website at <http://www.ABS-CompTech.com> or by calling their office.
