DEVELOPED FOR CORPORATE, PRIVATE AND HOMELAND SECURITY,
NEW INTERNET SECURITY TOOL KILLS SPAM ... DEAD

More than 84 percent of incoming email is SPAM; SpamZapper eliminates at least 98 percent.

June 22, 2005, (PITTSBURGH, PA) – Today, ABS Computer Technology, Inc., announces a new solution to the SPAM problem that makes Inboxes safer than ever. SpamZapper is a multi-layered solution for online security that defends users against SPAM, viruses, phishing and other online threats that compromise personal and corporate identity, security and financial privacy.

Developed in conjunction with research and security improvements on behalf of ISPs, the Pittsburgh FBI Infragard and numerous personal, corporate and homeland security initiatives, SpamZapper reduces SPAM by 98 percent.

“SPAM and related invasions of online security is at a higher level than ever and only going to get worse,” says Albert Whale, CHS CISA CISSP, president and founder of ABS and developer of SpamZapper. “We are literally getting attacked on all fronts by SPAM generators all over the world, and these are not just ‘nuisance’ emails. Individuals, businesses and government agencies are vulnerable and paying the price every day of privacy issues and corporate and financial security.”

Whale, who is certified in Homeland Security by the ACFEI (American College of Forensics Examiners International) and has over ten years of experience in developing ISP security and open source security, states that in addition to online security, SpamZapper restores and streamlines communication which is the most valuable asset for most customers.

“Time is money for my customers,” says Whale. “Whether you are in financial services, advertising, government or business, SPAM can literally paralyze or destroy operations.”

SpamZapper is a service-based solution, not a software package, which means that SPAM never enters an organization’s virtual walls. By stopping SPAM this early, customers also reduce the introduction of viruses, spyware and other online invasions.

“We are taking a ruthless angle here on SPAM,” says Whale. “This is not just to cut down on ‘unwanted emails,’ this is an all-out effort to eliminate dangerous attacks on my customers’

inbox. And we aren't just addressing the issue at the level of email or Internet surfing, we are working with Law Enforcement Agencies to go after the Spammers where they generate under the Federal **CAN SPAM Legislation.**"
